Note: this is Bronze medal Criteria - Contribution

Part BBa_K2114010 was chosen from a search conducted on parts which were poorly characterized. This part was selected for its possible large impact applications, namely for green-focused bioremediation projects or a targeted drug delivery project. The contribution made was to explain the purpose of the part, to breakdown the nature of its components and then explain the reason for its inclusion. Furthermore the reaction this part can catalyze is now highlighted with an expanded description on the suggested assembly of the part into a vector.
