

3rd April – Began looking elsewhere at other ideas besides UV protection – 3D tissue patterning and T cell therapy.

15th April – Continued along the lines of 3D tissue patterning or T cell therapy.

22nd April – Came out that we could do a two-phase project: sunscreen idea revived. Went for sunscreen based on all the previous information we gathered and the general interest shown by the team. Began thinking of solid modelling ideas for phase II alongside thinking about the gene circuit in greater detail.

29th April – Further discussed different modelling ideas and creation of software around the project such as an app.
