 - What did you find most interesting about our project or synthetic biology?
 - "I didn't know you could make plastic from cellulose"
 - "How they made it"
 - "Its cool that its with undergraduates not older people holding the patent"

- What is a concern you have about our biodegradable plastic?
 - “What is the difference between the plastic we currently use in the agriculture industry but your plastic?”
 - “What if it degraded before you wanted it to? Like if it degraded too fast”
- What are problems that you’d like to solve?
 - “Figure out why they aren’t recycling the recyclables more, and can we figure out a way to recycle it more”
- Would you be comfortable eating something grown with a biodegradable product?
 - “Yes we would be comfortable eating it, because it can go into the soil and its much more natural than like pesticides and the plastics that don't degrade” (two groups said this)
